

It's best to have the same brand of crayon (Crayola, RoseArt, etc) because they will melt at the same rate. Remove the papers from all crayons. We use a box cutter very carefully to split open the paper. You can also soak them in water first or whatever method works for you.

Use a silicone tray (shape trays can be fun and make cute crayons!) and break up the crayons. Make solid-colored crayons or mix them up by placing one color on each side of the cup. You can fill the silicone cup halfway, that's a pretty good-sized crayon for little hands; however it's up to you.

Place silicone tray on a baking sheet and ***bake at 250 degrees for 30 minutes***. Keep the tray steady while removing since the crayons are liquid (this is especially important if you are mixing colors in one cup so they don't blend) and let cool.

The crayons are usually ready to go in about 30 minutes. If you fill the cup higher, please add time baking.

Pop them out and start coloring!
